

## **Yeomans Slate Wholesalers - Granite Advice**

The following information is intended as a general guide only, if in doubt, please contact your supplier or distributor.

Granite is a common, coarse grained, light coloured, hard igneous rock consisting mainly of quartz, orthoclase or microcline and mica and is used in monuments and for building.

Granite stone is typically the hardest of the dimensional stones and can effectively withstand the vagaries of nature.

Granite tiles are quite literally as old as the earth, perfect for use in residential and commercial applications.

Granite slabs are ideal for fabricating counter tops, flooring, retaining walls and for landscaping.

Natural granite is typically bold, luxurious and sophisticated.
